DETAILED ACTION

Specification

1. The disclosure is objected to because of the following informalities: Each page of the specification should be numbered in sequence.

Appropriate correction is required.

2. This application does not contain an abstract of the disclosure as required by 37 CFR 1.72(b). An abstract on a separate sheet is required.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claims 1-21 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

5. Claims 1 and 12 recite the limitation "the assigned band" in lines 10 and 11, respectively. There is insufficient antecedent basis for this limitation in the claim.

6. Claim 1 recites the term "they" in line 30 is a relative term which renders the claim indefinite. It is unclear as to what "they" is referring to. Applicant needs to replace "they" with the appropriate meaning.

Art Unit: 2631

7. Claim 12 recites the term "them" in line 38 is a relative term which renders the claim indefinite. It is unclear as to what "them" is referring to. Applicant needs to replace "them" with the appropriate meaning.
8. Claims 1 and 12 recite the limitation "the successive products" in lines 15-16 and 18 respectively. There is insufficient antecedent basis for this limitation in the claim.
9. Claims 1 and 12 recite the limitation "its" in lines 17 and 19. It is unclear as to what "its" is referring to. Applicant needs to replace "its" with the appropriate meaning.
10. Claims 1 and 12 recite the limitation "the relative position" in lines 23 and 26, respectively. There is insufficient antecedent basis for this limitation in the claim.
11. Claim 1 recites the limitation "the antenna" in line 36. There is insufficient antecedent basis for this limitation in the claim.
12. Claim 4 recites the limitation "its" in line 1. It is unclear as to what "its" is referring to. Applicant needs to replace "its" with the appropriate meaning.
13. Claim 8 recites the limitation "it" in line 1. It is unclear as to what "it" is referring to. Applicant needs to replace "its" with the appropriate meaning.
14. Claims 11 and 21 recite the limitation "the doppler effect" in lines 3, respectively. There is insufficient antecedent basis for this limitation in the claim.
15. Claims 11 and 21 recite the limitation "the mobiles" in line 3, respectively. There is insufficient antecedent basis for this limitation in the claim.

Art Unit: 2631

16. Claims 11 and 21 recite the limitation "the electromagnetic field" in line 4, respectively.

There is insufficient antecedent basis for this limitation in the claim.

17. Claim 14 recites the limitation "said interface" in line 2. There is insufficient antecedent basis for this limitation in the claim.

Claims 2-3, 5-7, 9-10 and 13-20 are also rejected because they depend on a base rejected claim.

Allowable Subject Matter

18. Claims 1 and 12 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action.

19. Claims 2-11 and 13-20 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

20. The following is a statement of reasons for the indication of allowable subject matter: the present invention teaches a simulation process for obtaining a phase modulated radio frequency test signal. The closest prior arts of Dent U.S. Patent No 6,185,259 , Moriyama U.S. Patent No 6,483,880 B1 and Lu U.S. Patent No 6,025,758 teach a similar simulation process. However the closest prior arts mentioned above fail to anticipate or render obvious the following recited features: radio frequency conversion of the reconstructed analogue replicas, amplifying and filtering the replicas for obtaining N broad band radio frequency replicas (RF1, Rf2, RFN)

Art Unit: 2631

constituting a single test signal suitable for testing the operation of a directional receiver, preferably one included in a base station of a radio mobile system designed for cooperation with N-elements directive array and application of the N broad band radio frequency replicas (RF1, RF2, ... RFN) to N radio frequency inputs (IN1, IN2, ... Inn) of the receiver under test bypassing an antenna as recited in claims 1 and 12.

Conclusion

21. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Dent U.S. Patent No 6,185,259 B1 teaches a transmitter/receiver for GMSK.

Moriyama U.S. Patent No 6,483,880 B2 teaches a radio equipment.

Lu U.S. Patent No 6,025,758 teaches a method and apparatus for performing digital data signal modulation.

Tayebi et al U.S. Patent No 6,373,827 B1 teaches a wireless multimedia carrier system.

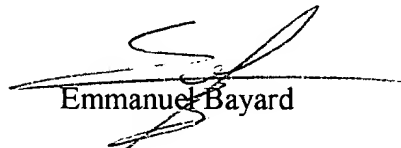

Taylor et al U.S. Patent No 5,764,693 teaches a wireless radio modem.
